

Picking a portfolio of AI vendors, based on ease of adoption and workflow breadth.

At a large firm the operational work runs thousands of manual hours a month: time entry, prebill and billing, intake and conflicts, document filing, CRM sync. It grows faster than headcount, and the context to automate it lives with the non-technical staff who run it. So only a tool easy enough for them can ever unlock it.

Where each tool lands

EASY ADOPTION

TECHNICAL SETUP

POINT SOLUTIONS

FIRM-WIDE WORKFLOWS

Every category already has its tools: legal point solutions, AI assistants, IT-department automation, and AI development platforms. The open space is **Operations AI**, the regulated, cross-system work that non-technical staff can automate themselves.

Why Caddi owns that square

Two things set Caddi apart, each on its own. It is built for **department-wide operations workflows**, the kind that unblock growth. And it is ideal for **regulated industries**: AI does the building, deterministic execution in the cloud does the running, and every action is audited.
